## **CLEANING PROCEDURES**

Specialty Lighting Industries makes our products to the highest level of fit and finish. Over time dust and dirt will accumulate on the housing, lenses, lamps and reflectors. This will diminish both the fixture's appearance and its optical characteristics. Proper cleaning will ensure that your fixture maintains optimal appearance and performance throughout its service.

The materials used in the fixtures are non-porous and can usually be cleaned with a damp lint free cloth. Our recommended cleaning procedures are as follows:

**Acrylic lenses** may be cleaned with a damp lint free cloth or with a non ammonia glass cleaner such as Glass Plus<sup>™</sup>.

**Aluminum reflectors** may be wiped clean with damp lint free cloth.

**Glass lenses** may be cleaned with glass cleaner. Small lenses may be washed in a dishwasher without detergent.

Metal finishes may be cleaned with a damp lint free cloth.

**Powder coated paint** finishes may be cleaned with a damp lint free cloth or with a non ammonia glass cleaner such as Glass Plus<sup>™</sup>.

Harsh detergents, thinners, chemicals, acids and abrasives will destroy the fixture materials and should not be used under any circumstance.
